KEEPING IT **SMOKELESS**

PRODUCT

The Windmaster Chimney Champ is South African manufactured and designed to extract smoke from braai areas and fireplaces. The unique and patent pending bearing system of the Chimney Champ has been tested to extract smoke of a temperature up to 250°C.

CONCEPT

The Chimney Champ is actuated by convection (upwards pressure of rising heat through the chimney) and is also assisted by the wind to extract. The rotating dome of the Champ creates a positive reaction which extracts unwanted and irritable smoke through the chimney of braai areas and fireplaces. This reaction also causes the Chimney Champ to draw the fire which creates quick and efficient smokeless heat.

CONSTRUCTION

Constructed of 0.6mm galvanised steel, the Chimney Champ smoke extractor is also coated with Variol self edging primer to prevent the steel from corroding against heat of up to 250°C.

The positive extraction created by the Chimney Champ's rotating dome, ensures a smokeless and efficient fire.
